

Applicant Medical Questionnaire

To be completed by the applicant (or parent for those under 18 years of age)

Currently under IHRB medical rules anyone suffering from certain medical conditions such as epilepsy or diabetes will be unable to secure any type of jockey’s license. However, it may still be possible to take part in training depending on individual circumstances. Candidates may be requested to attend the IHRB Medical Officer for clearance if there are any concerns of medical health and they are deemed suitable for training in all other regards.

By Inhalation – nose/ mouth/ Or Ingestion – mouth				
Diagnosis and date	Name of substance	Dosage	Prescribed by	Duration of treatment
By Injection				

Concussion is a traumatic brain injury. Our current knowledge is that repeated concussion may lead to long term cognitive impairment, but further research is ongoing. Horse racing has the highest incidence of concussion among sports. It is important that you do not return to riding while you are still recovering from concussion. If you suspect you have suffered a concussion, please inform a member of RACE staff for advice. You may be referred for further follow up. Do not hide it in view of the potential long-term effects. Current helmets do not prevent concussion. However, if you have suffered a concussion you should replace your helmet as its integrity will have been impaired.

I am aware there may be some medical health areas that raise safety concerns in relation to riding, and my medical records or I personally may be referred to the IHRB Medical officer for clearance.

I acknowledge that I understand the potential risks that I am exposing myself to.
